

Industrial Materials & Project Supply

Shandong Boguan Import & Export Co., Ltd.

Based in Jinan, China. Sourcing and supply coordination for industrial procurement.

Product imagery from the company catalogue.

We work with suppliers and production partners to review purchase requirements, drawings, inspection needs, packing and export documentation.

IN THIS OVERVIEW

Steel materials & structures	02	Telecom towers & poles	03
Power infrastructure	04	Special towers & poles	05
Machinery, fasteners & FRP	06	Sourcing & inspection	07

[Prepare your inquiry - page 08](#)

01 / MATERIALS & FABRICATION

Steel materials & structures

From a line-item material schedule to drawing-based steelwork, define the purchase around the current specification.

Steel & Metal Materials

Plate and sheet, coil, strip, sections, pipe and tube, stainless steel, and sheet piles. We coordinate sourcing around the specified product form, grade, dimensions and delivery requirements.

Product definition	Standard, grade, product form and surface finish.
Dimensions & quantity	Thickness, section or tube dimensions, lengths, tolerances and units.
Records & delivery	Certificates, testing, identification, packing and destination.

Steel & metal materials online

Steel Structures

Industrial supports, platforms, building steelwork and fabricated components sourced against project drawings.

Provide the current general arrangement, fabrication details and bill of materials. Identify materials, connections, finish, inspection stages and assembly groups.

Steel structures online

SCOPE TO CONFIRM

Materials under different standards require technical review. Structural design, civil works and site erection require separate written agreement.

02 / COMMUNICATION STRUCTURES

Telecom Towers & Poles

Structure procurement starts with the equipment arrangement, site conditions and project drawings.

Tower bodies & supporting steelwork

Telecom towers and poles, platforms, ladders and antenna supports. Include broadcast and microwave support structures where required.

Camouflaged structures

Pine and palm concepts combine equipment support with a specified appearance. Define the structural frame, camouflage treatment and antenna interfaces together.

Smart pole structures

Specify mounting provisions for communication, lighting, camera or display equipment. Identify each device and the party responsible for its integration.

Pine-style tower
Catalogue image

Prepare the structural brief

Include the project location, engineer-defined design criteria, structure geometry, equipment data and mounting elevations. Send current drawings, connection details, corrosion protection and inspection or trial assembly requirements.

Telecom range online

SCOPE TO CONFIRM

Active equipment, foundation design, installation and commissioning are separate responsibilities unless expressly included in the agreed scope.

03 / POWER PROJECT SUPPLY

Power Infrastructure & Equipment

Transmission tower steelwork, substation structures and project-specified distribution equipment.

Transmission towers

Define tower references, quantities, drawing revisions and required components. Include material, coating, connection hardware and packing requirements.

Transmission tower
Catalogue image

Substation structures & gantries

Steel columns, lattice supports, crossbeams and connection components are reviewed against the project layout and equipment interfaces.

Distribution cabinet sourcing

Provide a single-line diagram, equipment schedule and electrical specification. Establish configuration, ratings, components and required tests for the proposed equipment.

Substation steelwork
Catalogue image

Separate structural and electrical schedules

Include the relevant approval documents and inspection stages. Identify foundation, installation and connection responsibilities, together with the delivery sequence.

Power infrastructure online

SCOPE TO CONFIRM

Electrical acceptance, commissioning and grid connection require an expressly agreed scope. Mounted equipment is not automatically part of structural supply.

04 / APPLICATION-SPECIFIC STRUCTURES

Special Towers & Poles

Structural supply for lighting, surveillance, observation and specialist equipment support.

Lighting, monitoring & observation

Lighting and CCTV poles, monitoring towers, railway yard lighting structures, forest fire lookout and observation towers.

Industrial & equipment supports

Chimney, stack and flare support steelwork; radar, weather and navigation equipment supports; lightning protection and fire training tower structures.

Architectural steel structures

Describe the intended appearance, geometry and application. Define the steelwork and connection scope against project drawings.

Monitoring support
Catalogue image

Yard lighting structure
Catalogue image

Define the interfaces

Describe the function, location and engineer-defined design criteria. Include mounting positions, equipment data, access requirements and clearances. Specify platform use and occupancy where relevant.

Special towers & poles online

SCOPE TO CONFIRM

Lighting design, process performance, protection coverage, navigation approval and site commissioning remain with the responsible project parties unless expressly included.

05 / EQUIPMENT & COMPONENTS

Machinery, Fasteners & FRP

Coordinate the operating requirement, the interfaces and the items included in each supply package.

Machinery & Industrial Equipment

Describe the operating task, required performance and destination. We use the functional brief or equipment specification to organize supplier inquiries.

Technical brief: operating conditions, utilities, interfaces and acceptance requirements. For a specified make or model, include the complete reference and configuration.

Supply package: accessories, operating documents, spare parts, packing and any installation or training requirements. Availability and support obligations are confirmed in the supplier proposal and order.

Machinery & equipment online

Fasteners, FRP & Accessories

High-strength bolts, FRP radomes and tower accessories are specified against the main structure's drawings and item references.

Fasteners: standard, size, length, grade, finish and assembly components.

FRP radomes: geometry, mounting interfaces, environmental conditions and equipment-related performance criteria.

Specify quantities, identification and packing by tower, assembly or bulk quantity. Suitability requires review of the proposed item and supporting evidence.

Fasteners & FRP online

06 / WORKING WITH BOGUAN

Sourcing & Inspection Coordination

Agree the goods, documentation and responsibilities before the order proceeds.

01 Define the requirement

Product or application, quantities, destination and requested date. Include current drawings, applicable standards and a bill of materials.

02 Review the quotation

Check the proposed goods, quantities, specification basis, commercial terms and assumptions. Alternatives require technical review and acceptance.

03 Agree inspection & records

Define checks before production or procurement begins: material certificates and traceability; dimensions and interfaces; coating criteria; witness points and third-party involvement.

04 Prepare packing & documents

Agree identification, shipping marks, handling limits, packing groups and document formats. Define transport, customs, installation and commissioning responsibilities in the written order.

INSPECTION BASIS

Inspection availability and scope are confirmed with the relevant supplier. Certificates and reports must relate to the actual goods supplied.

07 / INQUIRY PREPARATION

Prepare Your Inquiry

Send the details you have. Mark undecided requirements "To be confirmed."

Product & application	Product category, intended use and components or services to be included.
Specification & quantity	Standard, grade or equipment reference; dimensions, units and quantities.
Drawings & acceptance	Current drawing or bill-of-materials revision; inspection and required records.
Delivery requirements	Destination, requested timing, packing and handling needs.
